

WHAT IS A SCHOOL OF INFORMATION?

Introducing the { iSchool Review }

A new publication showcasing the best work from schools of information worldwide

UNIFY

Typically, students enrolled in schools of information have no way to find out what is going on at other iSchools. We wanted to disrupt this sort of isolation and provide a window into what other iSchool students are working on, opening up inter-iSchool lines of communication.

DEFINE

iSchool students are famously diverse and interdisciplinary. For this reason, efforts to define them generally fall short. The iSchool Review attempts to solve this problem by embracing that diversity and demonstrating the capabilities of our international community.

SHOWCASE

A ton of excellent work gets done in professional master's programs like ours, but most of it is never seen outside of the classroom. We created a vehicle for displaying the best work from iSchools all over the world.
