Select Patient: Donny Dunlap

	SUMMARY	NOTES	ORDERS	DISCHARGE
<p><b>Donny Dunlap</b> MRN: 361412 Age: 35 Sex: Male Race: unknown DOB: 9/7/1988</p>	<p><b>Visit Summary</b></p> <p><b>Admission Date:</b> 09-07-2024 <b>Visit Reason:</b> Diabetic Ketoacidosis <b>Summary:</b> A 35-year-old male with a history of type 1 diabetes mellitus was admitted on 09/07/2024 with diabetic ketoacidosis (DKA) following a 3-day history of worsening abdominal pain, vomiting, altered mental status, and poor insulin adherence due to illness. On admission, he was tachycardic, dehydrated, and lethargic, with laboratory findings confirming severe hyperglycemia, ketonuria, and metabolic acidosis. Initial management included aggressive IV fluid resuscitation, insulin drip initiation, electrolyte correction, and continuous monitoring. Endocrinology and gastroenterology consultations were obtained to address his DKA and ongoing H. pylori treatment.</p>			
<p><b>Provider Information</b></p> <p> <b>Victoria Reynolds</b> Endocrinology</p>	<p><b>Admission Diagnoses</b></p> <ul style="list-style-type: none"><li>Type 1 Diabetes Mellitus</li><li>H. Pylori Infection</li><li>Chronic Migraines</li></ul>	<p><b>Acquired Diagnoses</b></p> <p>None</p>		
<p><b>Precautions</b></p> <p>None</p>	<p><b>Current Medication</b></p> <p>Insulin Lispro Dosage: IV drip at 6 units/hour</p>			
<p><b>Allergies</b></p> <p>None</p>				

"Though seemingly simple, the clinical process of reconciling patient medication lists is **incredibly time-consuming ...**"  
-**Matthew Growdon, MD, MPH**

"Continuing **inappropriate medications**, especially at **discharge**, can be detrimental to patient health and outcomes..." -**Brian L Michaels, PharmD, BCPS**

As an urgent care pediatrician....The more tools we have to **simplify this process** so that medication lists are up to date and are the current best treatment for the patient, the better care our patients will receive. -**Jessica Pourain, MD, FAAP**

As a hospitalist...reviewing a patient's medication profile is a **complex and time-consuming process**...Too often, **I don't have time to go through this exercise**....frequently requiring the review of **hundreds of pages of clinical notes**.... -**Cynthia Fenton, MD**

**37%**

Adults have polypharmacy

**13% to 39%**

Rates in 65+ y/o have tripled

**5% to 28%**

Of acute geriatric medical admissions are attributed to adverse drug events (ADEs)

# Technical Approach

# PPI Deprescribing Algorithm

## Why is the patient taking a PPI?

1

- Barrett's esophagus
- Chronic NSAID user with bleeding risk
- Severe esophagitis
- Documented history of bleeding GI ulcer

3

- Mild to moderate esophagitis
- GERD treated for 4-8 weeks (esophagitis healed, symptoms controlled)
- No diagnosis reason identified

2

- Peptic Ulcer Disease treated for 2-12 weeks (from NSAID; H. pylori)
- Upper GI symptoms without endoscopy; asymptomatic for 3 consecutive days
- ICU stress ulcer prophylaxis treated beyond ICU admission
- Uncomplicated H. pylori treated x 2 weeks and asymptomatic

## Synthetic Patient 1

Labeled Recommendation: Stop

### Medication Recommendation Summary

Based on the patient's health information, the recommended action for the patient's current medication is to **stop**. This recommendation is primarily due to the completion of the treatment course for Helicobacter Pylori (H. Pylori) infection, as indicated in the patient's notes history (source: notes). The patient has completed the 14-day treatment course with combination therapy and is scheduled for a follow-up H. pylori test in 4 weeks (clinician notes from 09/13/2024 and 09/07/2024).

## Synthetic Patient 5

Labeled Recommendation: Continue

### Medication Recommendation Summary

Based on the patient's health information, the recommended action for the patient's current medication is to **deprescribe**. This recommendation is supported by the presence of associated diagnoses in the patient's medical notes history, specifically the patient's past medical history of Gastroesophageal Reflux Disease (GERD) and ongoing management of GERD symptoms (Source: Patient notes history).

# Integrations

## Fast Healthcare Interoperability Resource (FHIR)

Query patient test data from the Epic sandbox environment

RxReduce

## RxReduce-API

API connected to RxReduce code base with fastAPI package

## Electronic Medical Record (EMR)

API output formatted for connectivity with EMR

**Pantoprazole 40mg:**

Take 1 tablet by mouth daily

**Recommendation: Stop** 

Modify

Resume

Stop Taking
