

ADHAWK

UNSEEN DATA, VISIBLE PROTECTION

Meet the Team

Name: **Chris Luczywek**
Title: **Data Engineer**
Speciality: **Machine Learning**

Name: **Ana Kritikos**
Title: **Technical Engineer**
Speciality: **Adtech Data**

Name: **Bryan Clark**
Title: **Analyst**
Speciality: **Intelligence Collection**

Name: **Alex Fink**
Title: **Consultant/Analyst**
Speciality: **IT Infrastructure/
Anti-human trafficking**

Problem and for Whom

Human Trafficking

- \$150–\$300 Billion industry worldwide.
- 27 million people are exploited for labor, services, and sex annually.

Ineffective Crime Detection

- Traditional crime data is often limited and fragmented
- Existing solutions lack comprehensive data integration

Our Solution

- **Unique Data Source:**
 - Vast, rich dataset not typically utilized
- **Machine Learning Integration:**
 - Analyzes large volumes of data & identifies subtle patterns
- **Proactive Detection:**
 - Detect early indicators for proactive intervention
- **Comprehensive Analysis:**
 - Holistic view of potential criminal activity

Cyber Security Relation

- Data Protection and Privacy
 - Highly sensitive data
 - Can be attributed to victims as well
- System Security
 - Secure by design
 - Threat Modeling
- Ethical use of Technology
 - SLA
 - Data Regulations

Setting the Scene: The Scenario

- This demo is based on an analyst that has identified three points of interest
- AdHawk geofenced and pulled three months of data from each locations and fed to Machine Learning model
- Machine Learning model utilized an anomaly algorithm to identify suspicious behavior
- AdIDs highlighted by Machine Learning model are fed back to analyst dashboard

Persona Title	Responsibilities	Needs	Objectives
Analyst Alice	Monitoring and alerting on suspicious data for early warning signs and predictions; focused on identifying trends in human trafficking activities	Near real-time data; ability to export reports; in-depth analysis	Analyze historical adtech data to find criminal patterns

Architecture & Secure by Design

STRIDE

- Implement MFA to mitigate unauthorized access
- Data encrypted in transit and at rest to prevent data leakage
- Role-based access control (RBAC) and regular audits to prevent data manipulation
- Zero trust architecture that verifies every access request and data upload
- Automated incident response

Future Vision

Automated data integration that provides real-time actionable insights, bridging the gap between physical surveillance and digital data

- Beyond Human Trafficking:
 - Detect patterns in various crimes and identify unusual activities or behaviors that could indicate threats
- Connecting Physical and Digital Footprints
 - Adding additional data sources to alleviate the need for the analyst to connect the two

Thank You!
